

# Time Warp

## Feedback to the Article

Article [Radio Signals out of Our Times](#) was published at Antentop 01- 2006 as well as at [www.cqham.ru](http://www.cqham.ru). Below I paste only the feedback on the article from [www.cqham.ru](http://www.cqham.ru). Also I paste a feedback received by me on my email. You see, another hams also have met something like Time Warp in the Air....

**July 26, 2006, Maxim, 4Z5PM:**

Already during several weeks every night in the time from 24.00Z till 02.00Z on CW segment of the 20 meters approximately each 40 minutes a propagation to South America is appeared. Duration of the propagation is from 2 to 8 minutes.

Does someone observe a similar?

**August 27, 2006 at 02:07 UA1TAT:**

All these facts (at the article Time Warp) break not the laws of the Nature but only our current knowledge about the Nature. It would be very interesting to collect the facts and then to study them. I met with the strange phenomena of Time Warp. At November 1984, at 144,050 MHz, I had heard my own CQ that I sent 14 minutes ago. I was very surprised because at the times only few hams from my location used to the 2 meters and I was familiar with all of them. So a joke from somebody was impossible.

## **ANTENTOP- 01- 2007, # 009**

I know some people who have come in to a forest at one place but came out at another place that was very far away from the place. They could not go so far by feet for the time. It really was and I wish see you while you be told to these people that it could not be.

### **August 28, 2006 at 20:33 RA9LZ**

Yes, somebody may smile and say! "crazy author." I could be done so, BUT... In the middle of 80s at one evening I sent CQ on the 40 meters. Nobody answered me. I went to my kitchen for a cup of tea. When I came back in the shack I heard my CQ from the transceiver. Pirate, had thought I. Again I sent CQ and through several minutes I had heard my CQ coming back from my transceiver. Okey, I returned my transceiver from the being frequency to several kHz apart, then wrote in the memory of my key my callcign (it was UA9LCT) with random letters, stand key at maximum speed and shot it into the Air. I fall from my chair when through several minutes I had heard the same from my transceiver. The phenomenon was lasted in the Air near 20 minutes... 73! Alexandr

... When I have read this article, I have remembered one episode from my life. I just had received my first callsign and then through a short time I had received QSLs with date that was one year before I got my ham license. There were QSLs from Canada and Yugoslavia. At all QSLs my report was 599. I would like reminded at first I had got 3- amateur category (at the USSR's qualification) that did not allow me to make QSOs with these countries. What it was, mistakes of the operators or something else?

### **September 7, 2006 at 15:16 Alexander T**

I very often meet one- way propagation at 10 meters. I have received (or only somebody has received my station) with 57- 59, but somebody (or me) hear nothing. QSOs were duplicated via ICQ. I very often hear small LDE in 0,5- 2 second from Radio China at 19, 25 and 31 meters.

### **September 7, 2006 at 14:54 Alexander T**

Sometimes when I have listening DX broadcasting station, I mention, that time signals, that was transmitted by the stations not correspond to my local time. Maybe the radio operators of those stations turn the time signal directed of their own hand- watch.

In the beginning of 80s, when I lived in the Northern Caucasia, I had received to my broadcast VHF receiver audio from TV that was going to 2 hour before real TV broadcasting. So, I could tell to my amused friends who was a winner in hockey or football. I can not understand how I could have received such signals...

## **Time Warp**

### **September 14, 2006 at 16:53 UA4CR**

In July of this year (2006), I was sitting before my transceiver and hearing the Air. Suddenly I heard: CQ 20, CQ 20, Radio Papa Nine.... Lots radio stations answered to the call, a real pile- up. I could not understand nothing, because radio station with RP9... were working in Russia only at May. It is special callsign devoted to the Victory day (9 May, 1945). The station was working 10- 15 minutes, then go to very deep QSB. I have understand, that in July I have heard special station that worked at the May on Victory Days (but from which year?)... At the time a noise was very high at the 20 meters.... 73, Vyacheslav

### **September 19, 2006 at 22:15 UA4HVS:**

I heard from somebody about strange phenomena that is occurred near 11 MHz. It looks like the radio signals with spectrum 3- 4 kHz near the frequency (11 MHz) was recorded during 15- 20 second and then transmitted in reverse spectrum. Like tape recorder, record any signal (ever noise) and then transmitted it in reverse...

### **September 20, 2006 at 21:01 UA4HVS:**

I have some records (made by me) of LW broadcasting with echo in some seconds. Real echo... I do not know how it can be...

### **September 22, 2006 at 22:08 Andrey, RW4NA:**

I want to thank the author for the article... It is very interesting theme. I would like to say what was happened with me. On 1982 year I was served in the Soviet Army, in a division located in Kemerovo region. I had chance to hear amateurs bands at the Army. One time I had heard at 40 meters with strong QSB CQ de UA4NAS (it was my callsign at the times!!). I recognize my hand key, it was really me! I heard that lots stations were calling UA4NAS but the strange UA4NAS gave CQ and CQ like it did not hear anyone. I was very choked by this. It was in real...

### **September 24, 2006 at 00:10 Sergey RW6AMP**

I decided to add some stuff from me. Some time ago (may be 1- 2 years) I have got returned several my QSLs from Germany with the mark "No the Callsign. " I checked the callsigns in databases from the internet. Really, there are no these callsigns. I was very surprised because I usually send my QSL (in Europe) in two cases: or the correspondent ask me about QSL either I reply to received QSL. So, I send the QSLs on request of these stations. As you know, a pirate, as usual, do not request for QSLs. I am on the Air very long time and I never do mistakes when I receive a callsign of my correspondent....

September 29, 2006 at 21:48 Aleksey UA9W \*\*

When I have got my callsign I sometimes spent in the Air 8 hours per day. I have used only CW. I look for interesting stations so I mostly heard the Air. Several times I heard how a station with the same callsign like mine worked in the Air with another stations. Copy cat, I thought, but very talent copy cat because he sent CW practically like me... When I have read the article I recognize that may be I have heard me from others times.

October 10, 2006 at 02:43 V.V.

"There are things, which we can not know, but it is impossible have known, what is these things".

In 1973 I was a schoolboy who is a radio fan. I made a wireless adapter (schematic was published in soviet magazine Radio). It was one- transistor VHF transmitter that can be received in distance of 10 meters. I connected the adapter to my tape recorder Nota and enjoyed hearing of the record of music of a local jazz- band from my home receiver that was switch on to VHF band. The receiver was placed in the distance of 5 meters from the tape recorder. When the tape was finished and tape recorder was stopped I turn the receiver to HF- band. Suddenly, when I look for HF stations (as usual I look for Voice of America), I heard the music that I transmitted 15 times ago. Like a stupid I stared to my stopped tape recorder with standing tape and heard the music with all defects that was on my tape. Unknown station had transmitted all the music and stopped at the same place like at my tape. After that only the silence was at the frequency... I was astonished I could not understand nothing... I was heard my broadcasting after near 15 minutes when I had stopped the tape. More, I had heard the broadcasting on another frequency (in another band!). Until today I can explain the situation only like devil's joke...

**I. G.:** Also I have received on my email some very interesting feedbacks to the article Time Warp. One feedback I paste below. The ham, who sent me that feedback, has agreed to publish it only under condition of complete anonymity.  
== I want to describe a strange case which has taken place with me.

I had obtained my ham license in 1977. Then I was active mostly CW on 40, 20 and 15 meters. But in summer of 1992 I have decided to try a 160 meters. I installed a sloper in 42 meters long. One end of the sloper was tied to my balcony (9 floor) another end was tied (through a gay) to a light pole.

## Time Warp

For the 160 meters I have used a home made one band transceiver (design of UA1FA, Radio #4, 1980) with PA made on 3x GU50 (GU50- a Russian tube, can give near 100 watts at 160 meters). In that summer I have done lots interesting QSO's. From these QSOs I have remembered a QSO with 4X4xxx, Israel. It was my first 4X4 on 160. It was 599 in both ends. Near half of hour we chatted about our equipment and life. It turned out, that my correspondent was immigrated to Israel from the USSR in 1981 year. I have sent my QSL to him but never have got his QSL.

In the winter of 1993 the sloper was broken by a storm wind as well as the storm broken my antennas for HF- an I.V. for the 40 meters and an UW4HW (broadband vertical) that I have used for the 20 and 15 meters. I could not fix the antennas straight away after storm. Then, in the 1993, my company did global cutting and I was dismissed. My live turned down I looked for any job and I had no time to fix my antennas and to work in the Air. In 1996 I was emigrated to Israel.

Through several years of my life in Israel I found a job at a very good company according to my qualification of Electronics Engineer. It was amused but in one of the departments of the company it was worked a ham with whom I had QSO in 1992. I talked with him about the QSO, it is occurred that he also had remembered the QSO, he sent me a QSL and did not get nothing... I told him that I also had not received his QSL. Through several days he met me and gave me a QSL for the contact. On the QSL the date was 1993, when I did not work in the Air. I told him about the mistake. On the other day he brought his log for 1993 where the QSO was written. I did not want looks like an idiot (only got good job), so, I told him, well, it is my mistake, of course, the QSO was in 1993... But I know that I did not work in the Air in 1993! ==
